The fuel consumption you achieve under real life driving conditions and CO₂ produced will depend upon a number of factors including the accessories fitted after registration, variations in driving styles, weather conditions and vehicle load. There is a new test used for fuel consumption and CO₂ figures. The CO₂ figure(s) shown, however, is based on the outgoing test cycle and will be used to calculate vehicle tax on first registration. Only compare fuel consumption and CO₂ figures with other cars tested to the same technical standard. Specifications shown have been achieved by production models under standard operating conditions. Data is intended to describe vehicles and their performance fairly, but may not apply to every vehicle. Colours, specifications and equipment may vary without notice. All details are correct at the time of going to print: December 2018. Vehicles shown throughout this brochure are for illustration only and may feature non-UK/ROI equipment.
